

Cystofix[®]

THE NEW REFERENCE IN SUPRAPUBIC CATHETERIZATION

Cystofix[®]

Ready to Use system:

Ready to Use system:

The catheter is already inserted into the cannula

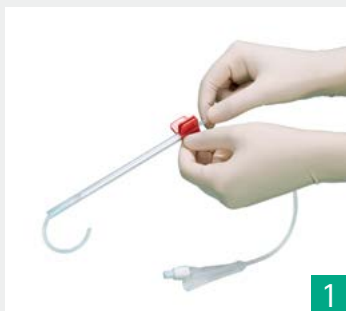

- Saves time
- The protection tube can remain in place until use.
- Increases safety and reduces the risk of sharp injury.

Supra Pubic Catheterization participates to the prevention of Nosocomial UTI

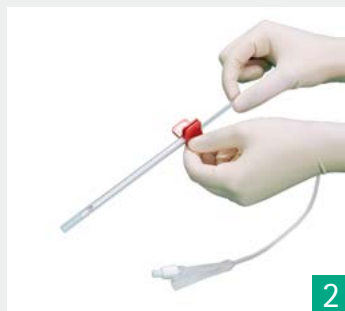

"There is a lower rate of infection in those with a suprapubic rather than urethral catheters despite the former being used for two weeks or longer"

EAUN guideline 2012. Evidence-based Guidelines for Best Practice in urological health care. Catheterisation. Indwelling catheters in adults. Urethral and suprapubic. Geng V, Cobussen-Boekhorst H, Farrell J, Gea-Sánchez M, Pearce I, Schwennesen T, Vahr S, Vandewinkel C.

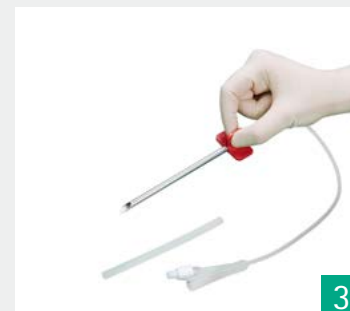

Ready to Use system:

The catheter is already in the cannula. Keep the protection tube on the cannula

Pull the catheter until the tip is right below the cannula bevel.

Remove the protection tube to begin the puncture.

The standard in suprapubic catheterization

NEW

New silicone integral balloon catheters:

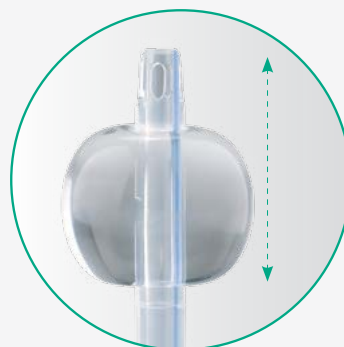

Low profile balloons:

- Designed for easier removal with reduced risk of cuffing.¹
- Designed for easier replacement without ridge for better insertion.

Silicone material:

- Can be used and replaced over long periods of time²

Short tip for the patient's comfort³
