

Collis Curve

Collis Curve is a uniquely designed toothbrush to clean three tooth surfaces and gum line all at the same time. It has two outer rows of curved bristles and a centre row of short straight bristles, enabling front, back and top of each tooth to be cleaned at once. Collis Curve is particularly useful where mouth care is provided by a second person.

Name

Collis Curve

Order no

1350 Collis Curve, baby 0-6 years

1351 Collis Curve, junior 6-12 years

1352 Collis Curve, adult soft

1353 Collis Curve, adult perio with extra long bristles

Description

Collis Curve is a uniquely designed toothbrush to clean three tooth surfaces and gum line all at the same time. It has two outer rows of curved bristles and a centre row of short straight bristles, enabling front, back and top of each tooth to be cleaned at once. Collis Curve comes in five sizes.

Ingredients/contents

The toothbrush handle is made of Polypropylene and the bristles are made of nylon (Tynex 612 Dupont). Metal braces keep the bristles in place.

Registration

The product falls under the Product Safety Act, 2004:451.

Packaging

Polyethylene bag and cardboard pin-pack.
