

NOSA microbial control reduces virus and bacteria by inhalation through the nose

- ✓ Easy to breathe through
- ✓ Comfortable & Discreet
- ✓ Innovative design

50-pack
Art.Nr: 30130501

Reduces
Virus
up to **93 %**

✓ CORONAVIRUS

✓ RHINOVIRUS

✓ NOROVIRUS

Reduces
Bacteria
up to **99 %**

✓ STAPHYLOCOCCUS (MRSA)

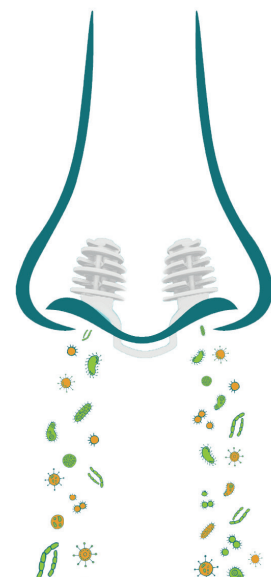

✓ PHNEUMOCOCCI

✓ E-COLI

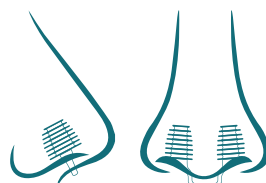

HOW DOES THE PRODUCT WORK?

NOSA microbial control is a nasal breathing device that provides a barrier between the user and the viruses and bacteria in the air you breathe. The air travels through the lamella structure where the virus and bacteria is captured and inactivated by silver ions in the lamella. In this way, the device reduces the amount of viruses and bacteria that enters the respiratory system. Our tests have shown that NOSA microbial control can reduce up to 93% of Coronavirus, Rhinovirus and Norovirus as well as 99% of Staphylococci, Pneumococci and E-coli when in contact with the device.

NOSA microbial control is a medical device class 1 and is available within Europe.
