Silicone is an optimal material for long-term catheterization. It reduces risk of encrustation and urethral irritation, while being a highly flexible and strong material, ensuring reliable passage and offering a high degree of comfort. Large lumens allowing for high flow rates and efficient drainage.

All Unomedical long-term catheters are recommended for usage of up to 90 days.

The expanded program of Unomedical Silicone Foley Catheters provides patients and health care professionals with a wide range of solutions for reliable and comfortable acute and long-term urinary drainage requirements including:

- Nelaton tip catheters
- Tiemann tip catheters
- Female length catheters
- 10 and 30 ml/cc balloon sizes
- Pediatric catheters
- 3-Way bladder irrigation catheters
- Thermo-sensing catheters

All long-term catheters are available as CARELINE™ catheter kits, containing one pre-filled syringe with 10% aqueous glycerine solution and one emptying syringe inside each sterile peel-pouch. All products are furthermore equipped with self-adhesive patient stickers.

All Unomedical 100% Silicone Foley Catheters feature thought-out design.

- Fully x-ray visible with radiopaque tip and line on shaft
- Excellent balloon geometry
- Transparent shaft for easy observation of drainage flow
- Integral, close fitting balloon
- For urethral and suprapubic use
- Self-closing valve with color coding

The complete product portfolio is free of latex, natural rubber allergenes and Phthalates, such as Bis(2-ethylhexyl) phthalate (DEHP).

100% Silicone Foley Catheters

Unomedical 100% Silicone Foley Catheters

The improved and expanded program of Unomedical Silicone Foley Catheters provides patients and health care professionals with a wide range of solutions for reliable and comfortable acute and long-term urinary drainage requirements.

Excellence in design

Silicone - The ideal material for long term use

Silicone is a highly flexible and strong material, which ensures reliable passage and offers a high degree of comfort during long term catheterization. Its smooth and inert surfaces help to avoid encrustation and urethral irritation.

Due to its transparency visual assessment of the drainage flow is easily possible, allowing judgement if a catheter change is necessary.

Silicone catheters provide a much larger drainage lumen compared to traditional Latex indwelling catheters,

Product range options

Tiemann Tip

A soft, flexible, curved tip, designed to ease catheterization in cases involving an enlarged prostate, strictures, or difficult catheterizations.

Female Length Catheters

Shorter length catheters, more convenient especially for ambulant female patients.

Pediatric

Adapted to pediatric anatomy with 30 cm length and balloon sizes between 1.5 and 5.0 ml/cc. Pre-loaded with nylon stylet to facilitate insertion.

3-Way Catheters

For post-operative drainage with additional channel for irrigation of the bladder. Equipped with a 30 ml balloon to aid hemostasis.

CARELINE™ catheter kits with pre-filled syringes containing 10% glycerine solution

10% aqueous glycerine solution is used in the pre-filled syringes inside the Unomedical CARELINE™ catheter kits.

White water easily diffuses through the membrane of a silicone balloon, leading to a loss of volume of more than 50% over a long term catheterization period, glycerine solution does not significantly diffuse through the wall of the balloon keeping the fill volume stable over a long period of time.

- Catheter is anchored securely with minimized risk of dislodgement
- No regular checks and topping up required
- Time and cost saving

CARELINE™ catheter kits are available in packs of five or single packed. Every catheter comes with an additional 10ml/cc emptying syringe to support catheter replacement.

Temperature Sensing Catheters

Unomedical Temperature-Sensing Foley catheters with a built in temperature-sensing thermister are used to accurately measure core body temperature in the bladder.

- Temperature sensor with measuring accuracy of +0.1/-0.1°C over a range of 25-44°C
- Compatible with all series 400 standard monitoring systems
- Available in adult and pediatric sizes

Catheter kits with pre-filled syringes containing 10% glycerine solution for hospital and home use
