

BiTrac™ NIV

Non-Invasive Ventilation Masks

The BiTrac™ NIV product family features a variety of interfaces that are designed to increase patient comfort and compliance in respiratory distress scenarios. The full-face and nasal masks are highly adjustable, and their cushion designs minimize pressure exerted on the bridge of the nose. Our total perimeter mask, the MaxShield™, avoids the nose and disperses pressure over a larger surface area while reducing claustrophobia for the patient. Our range of interchangeable elbows greatly reduces waste since you can easily remove and replace the mask's elbow when transitioning patients between standard ventilators and bi-level machines.
