## Administration Set Directions for Use

For use with SAPPHIRE INFUSION PUMP.  
This administration set may be used by gravity if it has a roller clamp and does not have a pressure activated valve (PAV).

A PAV is a valve located on the main fluid path below the administration cassette.

**WARNING:** Do not use if set parts are missing or misplaced.

• Only use correct delivery device. Make sure you replace set on time.

• Biologisk contamination kan resultera från rengöringsmedel och följer teknikens. Diskarta disponibla items proper after use.

• An air embolism can cause death or serious injury. Do not connect a patient to the infusion system unless the fluid path is punctured.

• Do not use a damaged set, set components or packaging.

• Do not use force when connecting to patient.

• Do not apply pressure or pressurized air to any outlet or tubing connected to the pump.

• Do not pull or stretch tubing in any section of the set when pump is in use, nor apply pressure to the reservoir container.

• Pump must be primed before use.

• Yellow-marked administration sets are intended for epidural infusion.

• Epidural administration sets with a Surety connector must be used only with a Surety infusion pump.

• Verify that the set components are positioned correctly.

• Use correct delivery device.

• When administration cassette is present, verify that the arrow on the administration cassette points toward the direction of the flow (from the cassette to the patient).

• When using a filter, verify that the arrow on the filter points toward the direction of flow, and maintain the filter level below the vascular access site.

• Always read and follow instructions in the User Manual.

• Refer to the label on the set for the specific intended use.

• Do not use set after expiration date.

• If present, insert spike into solution container.

**Use:**

A. For Sets with Administration Set

• A 1 Use of Administration Set from Gravity

Attention: Sets with a pressure activated valve (PAV) cannot be used for infusion by gravity.

• To perform prime or infuse by gravity refer to the Sapphire User Manual.

• Open the set prime the anti-free flow valve as illustrated by arrows 1 and 2 in Figure 1. After priming, push it to CLOSE the line (arrow 3).
