INTRODUCING THE STERILE SOLUTION

C-Armor is an expandable and collapsible sterile pouch that adheres to the patient drape at or above the level of the sterile field line. It permits unlimited fluoroscopic imaging in the horizontal plane, maintains the sterile field, and lies flat to the table when not in use permitting unencumbered surgical access.

ADVANTAGES OF THE C-ARMOR DRAPING METHOD

- Provides complete 5-sided protection
- Re-usable within the same procedure
- Reduces risk of sterile field breach
- Reduces material waste
- Decreases room activity
- Saves time and hassle

The Intuitive, User-Friendly Patient Safety Solution

THE PROTECTION OF C-ARMOR

- Easily understood by the entire surgical team
- Does not interfere with preferred patient draping techniques
- Permits excursion and visualization of the beam emitter

SOLVE MULTIPLE PROBLEMS WITH ONE SIMPLE SOLUTION

PREVENT THE EVERYDAY HASSLES OF CURRENT C-ARM DRAPING TECHNIQUES:

- DRAPE CAN FALL OFF C-ARM
- MATERIAL WASTE
- DRAPE MOVES BELOW TABLE LEVEL
- TIME DELAY
- RE-USE OF CONTAMINATED DRAPES
- SURGEON FRUSTRATION
- SURGEON AND TECH CONTAMINATION
- INCREASED ROOM ACTIVITY
