

Arterion™ offers multiple configurations for maximum configuration flexibility

Integrated Pedestal
The integrated pedestal has been completely re-designed for function and style

Table Mount
The small power supply allows mounting flexibility – under the table, in control room, in store room

Freestanding Pedestal
Ideal for moving the injector head on and off table when not needed

Overhead Counterpoise System
The ceiling mount option allows the injector head to be moved easily for injections

Option for all systems:

Heat Maintainer

Keep contrast temperature constant with Arterion's clear heat maintainer

Accessorize Arterion to meet your unique clinical needs

Dual Display Add a second display for maximum operational flexibility between patient room and control room

SYSTEM TECHNICAL SPECIFICATIONS:

Flow Rate:	0.1-45.0 ml/s in 0.1 ml increments 0.1-59.9 ml/m in 0.1 ml increments
Volume:	1-150 ml in 1 ml increments
Pressure Limit (150 ml syringe):	100-1200 psi in 1 psi increments 689-8273 kPa in 1 kPa increments
Rise Time:	0.0-9.9 seconds in 0.1 increments
Delay Time:	0.0-99.9 seconds in 0.1 increments
Fill Speed:	1-20 ml/s operator configurable
Fill Volume:	1-150 ml
Syringe Size:	150 ml
Syringe Heat Maintainer:	35°C (95°F) ± 5°C (9°F)
Protocol Memory:	40 Protocols
Injection Memory History:	50 Injections

MARK 7
ARTERION™
Injection System

We deliver contrast.
You deliver exceptional patient care.

ergonomic handle
for easier maneuverability

unique front
load syringe
for simple insertion
and clean removal

16% lighter
injector head*

32% lighter
pedestal unit*
Light and easy to move

intuitive
interface
for simple
injector control

smooth
arc design
for extended reach

20% smaller
footprint*

Mark 7 Arterion has stylish ergonomics that are designed for function; the pedestal system with a smaller footprint is lighter than MEDRAD's previous version, which increases mobility around your busy lab. And the lighter head now has a handle to make it easier to position for injection.

The Mark 7 Arterion™ Injection System is the latest in MEDRAD Interventional's "Mark" series of angiographic injectors.

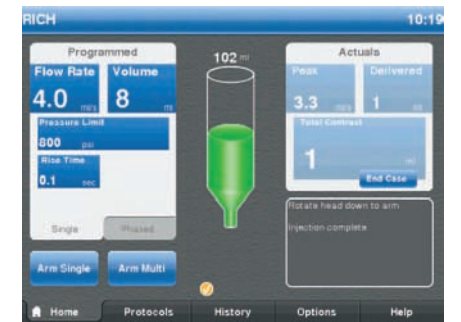

Compared to earlier systems, the Mark 7 Arterion is lighter, more maneuverable and easier to use so you can focus more on the patient. The clear and intuitive user interface guides you through proper set-up, and highlights the information you need to perform safe procedures.

Unique to the market, the front load system simplifies set-up and makes for a cleaner tear down. The clear syringe provides a higher level of confidence that you are ready to inject. With a smaller base, lighter head and a flexible articulating arm, the injector can go where it needs to go – even around corners.

And of course you can continue to count on what MEDRAD has always delivered: Reliable equipment with an extensive team of highly trained people ready to provide exceptional service.

Made from a clear material, the Mark 7 Arterion syringe (Catalog ART 700 SYR) allows you to easily view the inside of the syringe for smoother purging of air. And MEDRAD's famous fluid dots are still there to help—round for fluid, oval for air.

DISARMED STATE
The bright and colorful user interface is designed to highlight the information critical to performing a safe and clinically relevant injection.

ARMED STATE
The highlighted armed state also lets the user know they are ready to inject and is designed to be clearly visible. Our modified history and protocol screens will allow you to easily access the amount of contrast delivered to the patient and store and recall protocols.
