

Split sheet w/ Drisite® Plus for abdominal surgery

- BARRIER® split sheets are purpose-designed featuring only impermeable materials to minimise the risk of strikethrough in all surgical situations
- Reinforced materials in the critical zone minimise tearing and risk of breach in the infection control system
- The patented Drisite Plus system enhances drape absorption to minimise risk of bacteria transfer and unwanted liquids on the OR floor
- The new BARRIER surgical drapes feature soft and comfortable materials that conform naturally to the body. This assures adhesion and minimises risk of leakage

1 Position the split sheet towards the patient as indicated by instruction label.

2 Position the split sheet in the middle of the abdominal area.

3 Unfold the drape side to side.

4 Unfold the drape towards patient's feet.

5 Remove the release paper.

6 Secure adhesive edge one side at a time.

7 Position the adhesive op-sheet in the middle.

8 Unfold the drape.
