

GE Entropy Sensor and GE Entropy Cable

For monitoring the effects of certain anesthetics on the patients' central nervous system during anesthesia.

The disposable GE Entropy Sensor and reusable GE Entropy Cable are accessories for Entropy™ measurement. The sensor acquires the electroencephalograph (EEG) and frontal electromyography (FEMG) signals which are processed into two Entropy parameters, State Entropy (SE) and Response Entropy (RE). GE Entropy Sensor is for adults and children 2 years and up.

GE Entropy Sensor is backwards and forwards compatible with the GE Entropy measurement.

Features

- Single-point connection enables ergonomic and easy set-up
- Low and stable impedance provides good signal quality
- Wet-gel electrodes maximize patient comfort
- Leadwires offer flexible positioning of the sensor

GE Entropy Sensor and Cable

GE Entropy Sensor Specifications

- Disposable, single-patient use
- 3 pre-attached leadwires and one connector
- For adults and children 2 years and older
- Soft wet-gel electrodes
- Skin preparation required
- GE Entropy Sensor must be used with GE Entropy Cable
- Can be safely used during electrosurgery and defibrillation
- Maximum usage time - 24 hours
- Shelf life - 12 months

Maintenance

GE Entropy Sensor for single use only – do not reuse.

GE Entropy Cable can be wiped with mild detergent or disinfectant. You may also use Ethylene Oxide (ETO) or Gas Plasma Technology (STERRAD).

Note: For detailed use information, always refer to the Instructions for Use accompanying the product.

Ordering Information

<u>Description</u>	<u>Order Code</u>
GE Entropy Sensor (25/pkg)	M1038681
GE Entropy Cable, 3.5 m/11.5 ft (1/pkg)	M1050784
GE Entropy Start-up kit: GE Entropy Sensor (2 boxes) GE Entropy Cable (1pc)	M1060609
